[Interferon beta-1a - Wikipedia](#)

Interferon beta-1a (also interferon beta 1-alpha) is a cytokine in the interferon family used to treat multiple sclerosis (MS). It is produced by mammalian cells, while interferon beta-1b is produced in modified E. coli. Some claims have been made that Interferons produce about an 18-38% reduction in the rate of MS relapses.

[Avonex \(Interferon Beta-1a Autoinjector and Prefilled ...](#)

If you have an allergy to interferon beta-1a or any other part of Avonex (interferon beta-1a autoinjector and prefilled syringes (avonex)). If you are allergic to any drugs like this one, any other drugs, foods, or other substances.

[Beta Interferons | Multiple Sclerosis Society UK](#)

Beta interferons are recommended for the treatment of 'active' relapsing MS. This has been defined in guidelines as when you have two or more relapses in the last two years. But more and more MS specialists are defining 'active' MS as one recent relapse and/or signs on MRI scans that MS is active.

[WO2000023114A3 - Polymer conjugates of interferon beta- 1a ...](#)

An interferon beta polypeptide comprising interferon-beta 1a coupled to a polymer containing a polyalkylene glycol moiety wherein the interferon-beta-1a and the polyalkylene glycol moiety are arranged such that the interferon-beta-1a has an enhanced activity relative to another therapeutic form of interferon beta (interferon-beta-1b) and

**Treatment**  
AVONEX (interferon beta-1a) is approved by FDA to treat relapsing forms of multiple sclerosis (MS) to decrease the number of flare-ups and slow the occurrence of some of the physical disability that is common in people with MS. AVONEX is approved for use in people who have experienced a first attack and have lesions consistent with MS on

**Rebif (interferon beta 1a) | MS Trust**

Other names: Interferon beta 1a Rebif is a disease-modifying drug for relapsing remitting MS . You self-inject Rebif under the skin three times a week to reduce the number and severity of relapses.

**Interferon - Wikipedia**

Interferon beta-1a and interferon beta-1b are used to treat and control multiple sclerosis, an autoimmune disorder. This treatment is effective for reducing attacks in relapsing-remitting multiple sclerosis and slowing disease progression and activity in secondary progressive multiple sclerosis.

**Interferon Betas - Prices and Information - GoodRx**

Copaxone (glatiramer acetate) is an immunomodulator used to reduce the frequency of relapses in patients with multiple sclerosis (MS). It is not an interferon, but may be grouped with interferon betas Avonex and Betaseron; together the three first-line treatments are sometimes known as the "ABC" drugs for MS.

**Interferon Beta-1a Intramuscular Injection:  
MedlinePlus ...**

Interferon beta-1a intramuscular injection is used to reduce the number of episodes of symptoms and slow the development of disability in patients with relapsing-remitting forms (course of disease where symptoms flare up from time to time) of multiple sclerosis (MS, a disease in which the nerves do
