Design of experiments - Wikipedia

The design of experiments (DOE, DOX, or experimental design) is the design of any task that aims to describe or explain the variation of information under conditions that are hypothesized to reflect the variation.

Manufacturing Industries Need Design of Experiments (DoE)

the Design of Experiments, to tackle quality problems in key processes that they deal with everyday. We understand as Lye [2], the Design of Experiments (DoE) as a methodology for systematically applying statistics to experimentation. It consists of a series of tests in which purposeful changes are made to the input variables (factors) of a product or process so that one may observe and

Printer-friendly version. The textbook we are using brings an engineering perspective to the design of experiments. We will bring in other contexts and examples from other fields of study including agriculture (where much of the early research was done) education and nutrition.

Design of Experiments (DOE) for Manufacturing

Design of Experiments (DOE) is a powerful tool to understand and improve manufacturing processes. With the wide-spread use of computers and DOE software, one would have expected that majority of manufacturing engineers would be using DOE techniques. However, use of DOEs is not as prevalent as one would expect. The lack of penetration of DOE techniques could perhaps be attributed to a typical
