Large eddy simulation - Wikipedia

Large eddy simulation of a turbulent gas velocity field. Large eddy simulation (LES) is a mathematical model for turbulence used in computational fluid dynamics . It was initially proposed in 1963 by Joseph Smagorinsky to simulate atmospheric air currents, [1] and first explored by Deardorff (1970). [2]

large eddy simulation. Large-eddy simulation (LES) is a viable alternative to direct numerical simulation (DNS) of turbulent flows due to the fact that certain portion of the detailed small-scale information resolved in DNS is suppressed in LES technique in order to make the computational problem more tractable.
