[Expressed sequence tag - Wikipedia](#)

In genetics, an expressed sequence tag (EST) is a short sub-sequence of a cDNA sequence. ESTs may be used to identify gene transcripts, and are instrumental in gene discovery and in gene-sequence determination.

[Expressed Sequence Tag - an overview | ScienceDirect Topics](#)

Expressed Sequence Tag (EST) provides useful information because it is a profile of expressed gene sequences. It usually does not contain full length gene sequences since about 600 bp sequences are generated from the 5 and 3 end of cDNA clones.

[What are Expressed Sequence Tags \(EST\)? - Stack Exchange](#)

The question does not cite the source of the poster's information, but it might well be the Wikipedia article on ESTs. I suspect the reason that does not answer the first question ( What are ESTs ) is the confusion in how ESTs are generated from cDNAs implicit in the second question Which part of cDNA is cut .

Expressed sequence tags (ESTs) are fragments of mRNA sequences derived through single sequencing reactions performed on randomly selected clones from cDNA libraries. To date, over 45 million ESTs

[Definition of EST \(expressed sequence tag\) - MedicineNet](#)

EST (expressed sequence tag): A unique stretch of DNA within a coding region of a gene that is useful for identifying full-length genes and serves as a landmark for mapping. An EST is a sequence tagged site (STS) derived from cDNA.

### Expressed sequence tags: analysis and annotation

Expressed sequence tags (ESTs) are single pass DNA sequence reads derived from cDNA clones (1, 2). The EST strategy has been used by many parasitology programmes.
