[End Organ Damage In Hypertension - PubMed Central \(PMC\)](#)

End organ damage in hypertension can be detected early, reflects accurately the hypertensive patient's overall cardiovascular risk, and should be prevented and treated with antihypertensive treatment.

[Target Organ Damage in Hypertension - National Center for ...](#)

This special issue is related to the main concern in hypertensive disease: the target-organ damage. The selected papers approach some aspects of renal and cerebral disease associated to hypertension but the principal focus is on the arterial vessel as the main organ involved in hypertensive patients.

[Target organ damage in hypertension - Oxford Medicine](#)

Hypertension is associated with a prothrombotic state. Platelet activation, endothelial dysfunction and altered angiogenesis play an important part in the pathophysiology of target organ damage in hypertension. Target organ damage includes microvascular (retinopathy nephropathy, vascular dementia) and macrovascular injuries (stroke and myocardial infarctions). Good blood pressure

[High blood pressure dangers: Hypertension's effects on ...](#)

High blood pressure (hypertension) can quietly damage your body for years before symptoms develop. Left uncontrolled, you may wind up with a disability, a poor quality of life or even a fatal heart attack. Roughly half the people with untreated hypertension die of heart disease related to poor blood flow (ischemic heart disease) and another third die of stroke.

[Resistant hypertension and target organ damage ...](#)

Resistant hypertension (RH) is defined as a systolic blood pressure (SBP) or a diastolic blood pressure (DBP) that remains elevated (that is, 140/90 mm Hg in the general population) despite

[End Organ Damage - an overview | ScienceDirect Topics](#)

Hypertension may induce end organ damage in several organs like the heart (left ventricular hypertrophy), the kidneys (microalbuminuria), the brain (stroke), the eyes (retinal damage), and the vascular system (increased vascular wall thickness and arterial stiffness).

[II. Criteria for Diagnosis of Hypertension and Guidelines ...](#)

Shorter intervals between visits will be needed for symptomatic patients and those with severe hypertension,

intolerance to antihypertensive drugs, or target organ damage (Grade D). When the target BP has been reached, patients should be seen at 3- to 6-month intervals (Grade D).

#### **Common Characteristics of Liver Disease | Johns Hopkins ...**

Portal hypertension is high blood pressure in the portal vein, which supplies the liver with blood from the intestine and spleen. Portal hypertension may be due to increased blood pressure in the portal blood vessels, or resistance to blood flow through the liver. Portal hypertension can lead to the growth of new blood vessels (called collaterals) that

connect blood flow from the intestine to
