[Left Atrial Appendage & Closure | Cleveland Clinic](#)  
The Left Atrial Appendage (LAA) is a small, ear-shaped sac in the muscle wall of the left atrium. Blood collects there and can form clots in the LAA and atria. Learn more about options and devices available for closure of the LAA from the nation's top ranked heart center, Cleveland Clinic. [Benefits and Risks of Left Atrial Appendage Closure - SCAI](#)

This procedure, called left atrial appendage closure (LAAC), helps prevent stroke by sealing off a small, unnecessary section of the heart called the left atrial appendage (LAA). For people with Afib, most strokes get their start in the LAA because that is where blood clots tend to form.

## SCAI

At the top of the heart, on the left side of the left atrium, is a small sac known as the left atrial appendage (or LAA). As the heart pumps, blood travels through the atria and the ventricles. The LAA is hollow, so it fills with blood when the left atrium receives blood and it empties when blood travels out of the left atrium.

## Left Atrial Appendage Occlusion: What Are the Options and ...

Left atrial appendage occlusion (LAO) has emerged as an effective site-directed therapy in patients with nonvalvular atrial fibrillation (AF) for stroke prevention, who are ineligible for long-term oral anticoagulation. The objective of this study was to assess the safety,

## Left Atrial Appendage Closure - St Vincent's Heart Health

Left atrial appendage closure is a procedure which closes off the opening of your left atrial appendage. Your left atrial appendage is a small pouch, shaped like a windsock, found in the top left of your heart (the left atrium). Like your appendix, your left atrial appendage doesn't really have a clear role to play in your body.
