[Model-based reasoning - ScienceDirect](#)

1. Introduction. Since the advent of the mental model theory in the 1980s, reasoning with model-based mental representations has been an intuitive paradigm that has been shown to be theoretically sound and to possess some computational advantages over reasoning with logical formula-based representations.

[What is the difference between model-based and model-free reinforcement learning?](#) The model-based reinforcement learning tries to infer environment to gain the reward while model-free reinforcement learning does not use environment to learn the action that result in the best reward. The model-based learning uses environment, action and reward to get the most reward from the action. The

#### **Model Based Testing - tutorialspoint.com**

Model-based testing is a software testing technique in which the test cases are derived from a model that describes the functional aspects of the system under test. It makes use of a model to generate tests that includes both offline and online testing.

#### **Case-based reasoning - Wikipedia**

Case-based reasoning (CBR), broadly construed, is the process of solving new problems based on the solutions of similar past problems. An auto mechanic who fixes an engine by recalling another car that exhibited similar symptoms is using case-based reasoning.

#### **Model Based Testing Tutorial: What is, Tools & Example**

Model based testing is a software testing technique where run time behavior of software under test is checked against predictions made by a model. A model is a description of a system's behavior. Behavior can be described in terms of input sequences, actions, conditions, output and flow of data from input to output. It should be practically understandable and can be reusable; shareable must

#### **Model-based testing - Wikipedia**

Model-based testing is an application of model-based design for designing and optionally also executing artifacts to perform software testing or system testing. Models can be used to represent the desired behavior of a system under test (SUT), or to represent testing strategies and a test environment.
