The aggressive brain: insights from neuroscience ...

Aggressive behavior, defined as any action that is intended to harm (or threaten harm to) another individual, is nearly ubiquitous across species. Although specific expressions of aggression (i.e., phenotypes) often differ across species, the organization and function of relevant brain structures is often highly similar.

Aggression - an overview | ScienceDirect Topics

Aggression ranks among the most misunderstood concepts in all the behavioral sciences. It is commonly viewed by the general public as an aberrant form of behavior, with situations of conflict pictured as unfavorable and stressful circumstances, brought about by amoral urges, in critical need of the cognitive control, and with negative consequences for all involved. This chapter focuses on the **A Neuroscience Perspective on Brexit | Psychology Today**
