Popular benchmark problems for geometric nonlinear ...

In most, if not all, of the previous work on finite element formulation and nonlinear solution procedures, results of geometric nonlinear benchmark problems of shells are presented in the form of load deflection curves.

Geometrically nonlinear analysis of shell structures using ...

This paper presents a state of the art review on geometrically nonlinear analysis of shell structures that is limited to the co-rotational approach and to flat triangular shell finite elements. These shell elements are built up from flat triangular membranes and plates. We propose an element comprised of the constant strain triangle (CST) membrane element and the discrete Kirchhoff (DKT) plate element and describe its formulation while stressing two main issues: the derivation of the

Nonlinear analysis of elasto-plastic shells by hybrid ...

An efficient procedure for the nonlinear analysis of elasto-plastic shells is obtained based on an incremental variational functional of the Hellinger-Reissner type.
