Functional Nucleic Acid Sensors - PubMed Central (PMC)

As the nucleic acid equivalent of antibodies, Ellington and co-workers designed an aptamer switch as shown in the left panel of Figure 23B. 402 The 3'-end of the DNA (in blue) was blocked by a fraction of the PDGF aptamer sequence (red). In the presence of PDGF, the aptamer switched its structure and released the 3'-end sequence of the DNA to form the binding structure. The two ends of
