Pathogenomics - Wikipedia

Pathogen infections are among the leading causes of infirmity and mortality among humans and other animals in the world. Until recently, [when?] it has been difficult to compile information to understand the generation of pathogen virulence factors as well as pathogen behaviour in a host environment.

Pathogen Genomics - Research

M. tuberculosis, the most prominent member of the MTBC, is an obligate human pathogen and the causative agent of tuberculosis (TB), which remains one of the leading global public health problems. To decipher the biology and the evolution of present day mycobacterial species, we are building complete genetic maps of these species using comparative and functional genomics approaches.
