Addgene: Plasmid Cloning by PCR (with Protocols)

When cloning by PCR, it is especially important to run the product on a gel. This allows you to visualize that your PCR product is the anticipated size and that your band is strong (indicating that the PCR reaction worked and that you have a sufficient amount of DNA).

PCR Cloning Method | NEB

PCR cloning is a rapid method for cloning genes, and is often used for projects that require higher throughput than traditional cloning methods can accommodate. It allows for the cloning of DNA fragments that are not available in large amounts.

Cloning the Gene-of-Interest into a Plasmid Vector | Sigma ...

Selecting the Cloning System and Plasmid Vector. Genetic engineering is used in thousands of laboratories around the world. Given its importance it is remarkable that cloning strategies for many of the popular DNA components are not standardised.

PCR Cloning Protocols Books Pics Download new books ...

In the post-genomic era, PCR has become the method of choice not only for cloning existing genes, but also for generating a wide array of novel genes by mutagenesis and/or recombination within the genes of interest.

Cloning PCR Products, presents both conventional and novel enzyme- free and restriction site-free procedures to clone PCR products into various vec- tors, either directionally or non-directionally.

Cloning & Transformation | Thermo Fisher Scientific - CA

Blunt cloning vectors and directional TOPO cloning technologies are designed to clone PCR products produced by proofreading polymerases. Successful cloning depends upon using the correct polymerase with your cloning vector.

TA Cloning Kit, Dual Promoter, with pCRII Vector and One ...

The TA Cloning Kit Dual Promoter with pCR II vector provides a quick, one-step cloning strategy for directly inserting a Taq-amplified PCR product into a plasmid vector. The T7 and Sp6 promoters of the pCR II vector allow in vitro transcription of the insert to produce sense or anti-sense products.
