[A contraction approach to periodic optimization problems](#)

periodic optimization problems Leif K. Sandal Sturla F. Kvamsdal Jose M. Maroto Manuel Morin Consider an infinite horizon, multi-dimensional optimization problem with arbitrary but finite periodicity in discrete time. The problem can be posed as a set of coupled equations. We show that the problem is a special case of a more general class of problems, that the general class has a unique TCP-AQM Interaction: Periodic Optimization via Linear ...

For a given TCP version, we define the optimal strategy for the AQM router as a solution of a nonlinear periodic optimization problem, and we find this solution using a linear programming approach

Does time-dependent periodic control yield better process performance than optimal steady-state control? This paper examines exhaustively the role of first order necessary conditions in answering this question.

[Periodic optimization of a chemical reactor system using ...](#)

Summary. A perturbation approach is presented to the periodic optimization problem of certain classes of nonlinear dynamical systems, for small-amplitude forcing functions, and within specific frequency ranges derived from Guardabassi's γ -criterion.

[Resonance vibration of a thermally-actuated optical fiber ...](#)

Results show that, under periodic excitation and constant input power, the temperature and actuation amplitude initially increase with increasing the actuator length. However, at a certain length, temperature oscillation peaks and actuation oscillation reaches a plateau. This critical length is a function of material parameters of actuator (mainly thermal diffusivity) and frequency of excitation.
