A secondary electron spectroscopy and electron energy loss ...

The interaction of oxygen with a polycrystalline aluminum sample has been studied using electron energy loss spectroscopy (ELS) and secondary electron spectroscopy (SES) over a wide range of primary electron energies (30 E p 250 eV). The use of low primary electron energies enables the detection of interband transitions previously unobserved in reflexion energy loss spectroscopy. For Product Environmental Profile

the high side of the primary winding in series. This is a step-up auto-transformer. When the other end of the secondary winding is connected to the primary winding in reverse polarity, the output will read 90 V for an input of 100 V. This is a step-down auto-transformer. Using a raise/lower switch, it is possible to obtain both of these functionalities with a regulation range of 20%. As
