[Secretory protein - Wikipedia](#)

A secretory protein is any protein, whether it be endocrine or exocrine, which is secreted by a cell. Secretory proteins include many hormones, enzymes, toxins, and antimicrobial peptides. Secretory proteins are synthesized in the endoplasmic reticulum. Production. The production of a secretory protein starts like any other protein. The [Cell Secretion - University of Washington](#)

If the protein is to be used with the cell, the ribosome remains in the cytosol and the completed protein is released into the cytosol. But if a protein is destined for secretion, the very first amino acids in the polypeptide chain are a special sequence called the signal sequence.
