Silicate minerals - Wikipedia

Silicate minerals are rock-forming minerals with predominantly silicate anions. They are the largest and most important class of rock-forming minerals and make up approximately 90 percent of the Earth's crust.

Mineral Gallery - the Silicate Class

The Sorosilicate Subclass (double tetrahedrons)

Sorosilicates have two silicate tetrahedrons that are linked by one oxygen ion and thus the basic chemical unit is the anion group (Si_2O_7) with a negative six charge (-6).
