In vivo Effect of Serotonin on Cat Pial Veins Ko LEBER, L. Mo AUER, and I. SAYAMA | Summary In a series of 6 adult cats, the reactions pial veins to topically administered 10⁻⁴ M serotonin (5-HT) were investigated using the closed cranial window technique and multichannel-videoangiometry. Small pial veins dilated by 80±2%; large veins tended to remain unreactive or to constrict. The
