What is conventional machining process? - Quora  
Machining is a processes in which a piece of raw material is cut into a desired final shape and size by a controlled material-removal process. Conventional machining uses tools, such as lathes, milling machines, boring machines, drill presses, or others, with a sharp cutting tool to remove material.

For many common applications, the traditional machining is equally as important to the process as the high capital-high technology machines. Incodema utilizes high-quality drill presses, lathes, and part assembly areas with the same dedication to speed and accuracy as all the other locations in the facility.
